Technologies**

Deep Sea Radiographic System

Applications:

- Weld inspection
- Damage assessment
- Corrosion measurement

Benefits:

- Low cost
- Low risk
- Ease of use

Technology Transfer Division

Summary:

This invention builds on LANL's portfolio of innovative imaging technologies. This intellectual property enables the exposure and processing of deep sea radiography for a variety of applications.

Development Stage:

A branched version of the software has been released as open source software, while development continues on an "in house" version.

Patent Status:

Application jointly owned (third party) and filed. DOE reference no.: 121,218.

Licensing Status:

This technology is jointly owned with a third party and is only available non-exclusively in specific fields of use.
